

Bird Mesh - Flexi

Our Bird Mesh - Flexi has been hot dipped galvanised then PVC coated for additional protection & durability. While also matching the aesthetic of the black framed panels.

Usage:

Ideal for use in screening solar panels to prevent birds from accessing the underside of the panels, where they nest and may cause nuisance or potentially can damage cables. Compatible with our Plastic Solar Bird Mesh Clips: **SKU_XBTPI-BMPN_B50X1**, as the clips' locking plate will not pass through the mesh.

Use heavy gauge side cutters to cut the mesh to required size

Bird wire mesh is supplied in rolls. The preferred technique is to cut it into six-foot lengths and straighten before getting onto the roof. Then, using a length of 2" X 4" timber, bend up the bottom inch of mesh to about 30 degrees. This "kick-out" helps to lock the mesh firmly into place against the solar panel.

Features:

- Galvanised & PVC coated
- Black Bird Mesh
- 30m Long
- Opening 12.5mm x 25mm
- Wire Diameter 1.2mm
- 12 Year Warranty*
